PCT/KR2004/002265

Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrial applicable have not been examined in respect of:
the entire international application,
claims Nos. 3-10
because: the said international application, or the said claims Nos. relate to the following subject matter which does not require an international preliminary examination (specify):
the description, claims or drawings (indicate particular elements below) or said claims Nos. 3-10 are so unclear that no meaningful opinion could be formed (specify):
See the Supplemental Box.
•
the claims, or said claims Nos are so inadequately supported
by the description that no meaningful opinion could be formed (specify):
no international search report has been established for said claims Nos.
a meaningful opinion could not be formed without the sequence listing; the applicant did not, within the prescribed time limit:
furnish a sequence listing on paper complying with the standard provided for in Annex C of the Administrative Istructions, and such listing was not available to the International Preliminary Examining Authority in a form and manner acceptable to it. [International Preliminary Examining Authority in a form and manner acceptable to it.] [International Preliminary Examining Authority in a form and manner acceptable to it.] [International Preliminary Examining Authority in a form and manner acceptable to it.] [International Preliminary Examining Authority in a form and manner acceptable to it.] [International Preliminary Examining Authority in a form and manner acceptable to it.] [International Preliminary Examining Authority in a form and manner acceptable to it.]
a meaningful opinion could not be formed without the tables related to the sequence listings; the applicant did not, within the prescribed time limit, furnish such tables in electronic form complying with the technical requirements provided for in Annex C-bis of the Administrative Instructions, and such tables were not available to the International Preliminary Examining Authority in a form and manner acceptable to it.
the tables related to the nucleotide and/or amino acid sequence listing, if in electronic form only, do not comply with the technical requirements provided for in Annex C-bis of the Administrative Instructions.
See Supplemental Box for further details.

International application No. PCT/KR2004/002265

Roy No. IV. Look of with the state of the st
Box No. IV Lack of unity of invention
In response to the invitation to restrict or pay additional fees the applicant has, within the applicable time limit: restricted the claims
paid additional fees
paid additional fees under protest and, where applicable, the protest fee
paid additional fees under protest but the applicable protest fee was not paid
neither restricted nor paid additional fees.
2. This Authority found that the requirement of unity of invention is not complied with and chose, according to Rule 68.1, not invite the applicant to restrict or pay additional fees.
3. This Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is:
complied with.
not complied with for the following reasons:
The application does not meet the requirement for the unity of invention set forth in PCT Articles 3(4)(iii), 34(3) and Rule 13.1. It is immediately evident "a priori" that the independent claims relate to two different problems and have little in common.
Claimed invention (i): claims 1 and 2 are directed to a thermally operated valve.
Claimed invention (ii): claims 3-10 are directed to an automatic circulation device of warm water.
While it can be said that the claimed invention (i) is one of the special technical features of the claimed invention (ii), nevertheless, this does not provide a required novel concept in that the claimed invention is known from D1 and D2.
•
. Consequently, this report has been established in respect of the following parts of the international application:
all parts.
the parts relating to claims Nos.

International application No.

PCT/KR2004/002265

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Statement	•		
Novelty (N)	Claims	1,2	YES
	Claims	None	NO
Inventive step (IS)	Claims	None	YES
	Claims	1,2	NO NO
Industrial applicability (IA)	Claims	1,2	YES
	Claims	None	NO NO

2. Citations and explanations (Rule 70.7)

Reference is made to the following documents:

D1: EP 55813 A . D2: JP 64-24177 A

Claim 1 is directed to a gas flow rate control valve and claim 2 is directed to a gas flow open/close valve. However, the subject matters of claims 1 and 2 are very much the same in that the valves are thermally operated.

D1 discloses a thermally operated safety-valve for use in a hot-water heating installation, comprising a valve housing having an inlet, an outlet, a closing spring, a seal ring; and a temperature sensor of vapor pressure type.

D2 discloses a heat sensing cylinder-rod actuator comprising a cylinder, a spring, a rod and a volatile evaporating substance.

Novelty

None of the prior art documents D1 and D2 disclose a valve case having an expanded bottom part. Hence, the subject matters of claims 1 and 2 seem to be novel (PCT Article 33(2)).

Inventive Step

The valve case having the expanded part is considered to be a slight constructional change which comes within the scope of the customary practice followed by persons skilled in the art as the advantages thus achieved can readily be foreseen. Consequently, the subject matters of claim 1 and 2 lack an inventive step (PCT Article 33(3)).

International application No.

PCT/KR2004/002265

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

It is understood from the description that a burning control means activated by the temperature of a boiler is essential for the automatic circulation of the present invention but it is not properly described in claim 3. Therefore, claim 3 does not meet the requirements of PCT Article 6 taken in combination with PCT Rule 6.3(b) that any independent claim must contain all the technical features essential to the definition of the invention.

INTERNATIONAL PRELIMINARY	REPORT ON DATENTABLE TOW
	REFURITIN PATRICIARITIV

International application No.

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

Box No. III

Claim 3-10 are so unclear that no opinion could be formulated as to novelty or inventive step. The problem is that the working of the automatic circulation device of claim 3-10 leaves the reader in doubt. According to the description, the water circulation of the device is caused by the vapor pressure created by heating of the boiler, so no other pressurizing means is needed. But, there is much doubt whether the vapor pressure of the circulation pipes could be increased large enough to render the water circulate because it is described in the description that water in the boiler won't be heated up to 100°C by the function of the gas control valve. Since, a specific volume of water doesn't increase much before boiling, the pressure rise in the boiler of the present invention would result in just a slight change.
